Scientific examination of alternative methods of treatment

Patients diagnosed with cancer, nowadays taking increasingly advantage of the new methods of naturopathy for their treatment. Many of these treatments, especially those, indicated of oncology origin, are mostly not completely researched to its full extend, nor is it reported that these methods actually do change the patients curing on the way to recovery at all. The substance “Amygdalin”, or better known as “B17”, belongs to this group of naturopathy medication. To our opinion, only professional, scientific research will bring prove and sustainable results.

The influence of „B17“ in urology towards tumor growth

Under the leadership of Prof. Dr. Axel Haferkamp (director of the urology section) and Prof. Dr. Roman Blaheta (head of the urological laboratory), both at the Frankfurt based University Hospital, a pilot study was conducted in order to prove, that Amygdalin indeed is able to restrain and slow down isolated tumor cells. Based on the positive results of this study, a new large scale research was started in order to discover the effect of Amygdalin towards aggressive propagation of tumor cells.

Staff of the KGU laboratory urology

The goal of the project is simple; preparing Amygdalin scientifically correct for acceptance, based on substantiated and objectively proven facts.

Questions, like to which extend Amygdalin is able to restrain uncontrolled propagation, and secondly, what sort of neurotransmitters (stimulating the signals of tumor growth inside the cells) can be stopped, need to be answered.

We do
support
innovative
cancer research

why don't you
join us

It is not enough to know –
we must apply.
It is not enough to want –
we must do.”

Quote from J.Goethe

In 2007, Brigitta and Norbert Muth (a consultant`s couple from Wiesbaden) established this foundation. The aim is to generate finance for the fostering and supporting of research in the sectors of medicine and engineering. The copy of the certificate below shows the official approval of the regional administration in Darmstadt.

The charitable status of this foundation is also depending on donations, therefor allowing for tax reductions if wanted. If you wish to donate towards this foundation or if you feel to support projects of this foundation, the possibility of becoming an associate founding member is also possible.

Commitment of the foundation

The foundation is able to participate in ongoing projects of the medical- and engineering sectors, as well initiate new projects. The expressed purpose of the Foundation, allows for multiple commitments and involvement.

Research

Awarding mandates for research assignments in the medical sector, especially the research and improvement of new methods for patient treatments, is the core of this foundation.

Scholarship / Bursary

Offering scholarships to selected candidates for the studying and further education in the sectors of Medicine and Engineering is another elementary concern of our foundation.

I am / we are interested

[I would like to get more detailed information about the Brigitta and Norbert Muth foundation](#)

- I would like to donate to the research project of B17 against the growth of urology tumors
- Please contact me, I would like to participate and support this foundation
